

	Total Time for 2d array	Total Time for an array of pointers
1000	0.002374	0.000650
10000	0.020704	0.008276
100000	0.217311	0.098496
1000000	1.929455	0.793164
10000000	18.920269	7.775743
100000000	167.814691	75.269371

1. I personally think that , the part2 program had part 1 and part 2. So part1 was harder to me to code up. Because, It had 2d array which was quite difficult but managed to do it after referring the Brooke Chenoweth slides.
2. I think for me pointers was much easy to code up and understand . Also, it is very efficient to use.
3. I was happy when I saw my result after 100 errors and definitely it is worth to have many errors , which made me curious to code up more.
